PROFESSIONAL SUMMARY

Motivated AI & ML undergraduate experienced in building intelligent systems, NLP applications, and real-world web solutions. Skilled in developing scalable AI-driven products with modern GenAI tools, and passionate about Agentic AI, automation, and data-driven problem solving.

EDUCATION

B.Tech in Artificial Intelligence & Machine Learning

2023 – Present

R.C. Patel Institute of Technology, Shirpur

GPA: 9.20

TECHNICAL SKILLS

Programming	Python, SQL
AI/ML	Machine Learning, NLP, Data Preprocessing, Model Evaluation
Frameworks & Libraries	Flask, LangChain, Basic API Development, Pandas, NumPy, Matplotlib, Seaborn
GenAI Tools & Platforms	OpenAI APIs, MCPs, n8n, RAG, GitHub, Docker (basic), AWS (basic), Vector DB
Soft Skills	Leadership, Communication, Problem Solving, Presentation

EXPERIENCE

Freelance AI & Web Developer

2024 – Present

- Delivered custom web-based and AI-driven solutions for multiple clients, managing requirements from consultation through deployment. [Portfolio](#)

AI Research Intern – Tagowls

Aug 2025 – Nov 2025

- Working on NLP and real-world ML applications; exploring Agentic AI workflows and RAG-based systems.

AI/ML Intern – CICD Prosystems

Jun 15 – Aug 15, 2026

- Worked on AI/ML tasks including data preprocessing, model building, and evaluation, gaining hands-on exposure to applying machine learning techniques to real-world problems.

PROJECTS

Asynchronous Federated Learning with Robust Aggregation

Tech: Federated Learning, Robust Aggregation, Distributed Systems, Python

- Developed a privacy-preserving federated learning system for decentralized model training across multiple clients, implementing robust aggregation to handle noisy updates and improve model stability and convergence on IID and non-IID datasets.

AI-Powered Automotive Customer Sentiment & Insights Platform

Tech: Machine Learning, NLP, Sentiment Analysis, Text Classification, Conversational AI, Python

- Built an AI/ML system that analyzes social media and customer opinions on automobiles, classifying sentiment and extracting preference insights to support automotive sales growth and customer experience.
- Combined ML-based sentiment classification with customer preference analytics for real-time insight generation, and developed a functional AI chatbot prototype for interactive, conversational access to results.

AI-Based Behavior-Aware Personalized Fraud Detection System

Tech: Python, Isolation Forest, One-Class SVM, XGBoost, Machine Learning

- Designed a personalized fraud detection system using dynamic user spending profiles and transaction patterns, combining anomaly detection with supervised learning for real-time, explainable risk evaluation that reduces false positives.

LEADERSHIP & ACTIVITIES

- 1st Place** – GDG On Campus Hackathon, DY Patil Kolhapur
- Core Member – E-Cell; Technical Member – Data Polaris
- Invited as guest speaker to conduct sessions on AI fundamentals and future technologies for students.
- Attended 5+ hackathons, 1 bootcamp, and multiple AI events.
